SESSION 36 · FINAL EVALUATION

# Paper Trading Project

Final Portfolio, Strategy Presentation & Reflection Report

**Student Name:** Youthaleshia L
**Programme:** II BCOM Honours
**Trading Platform:** TradingView

# 1. Introduction

**Paper trading:** Simulated trading with virtual money at real-time market prices, to test decisions without risking real capital.

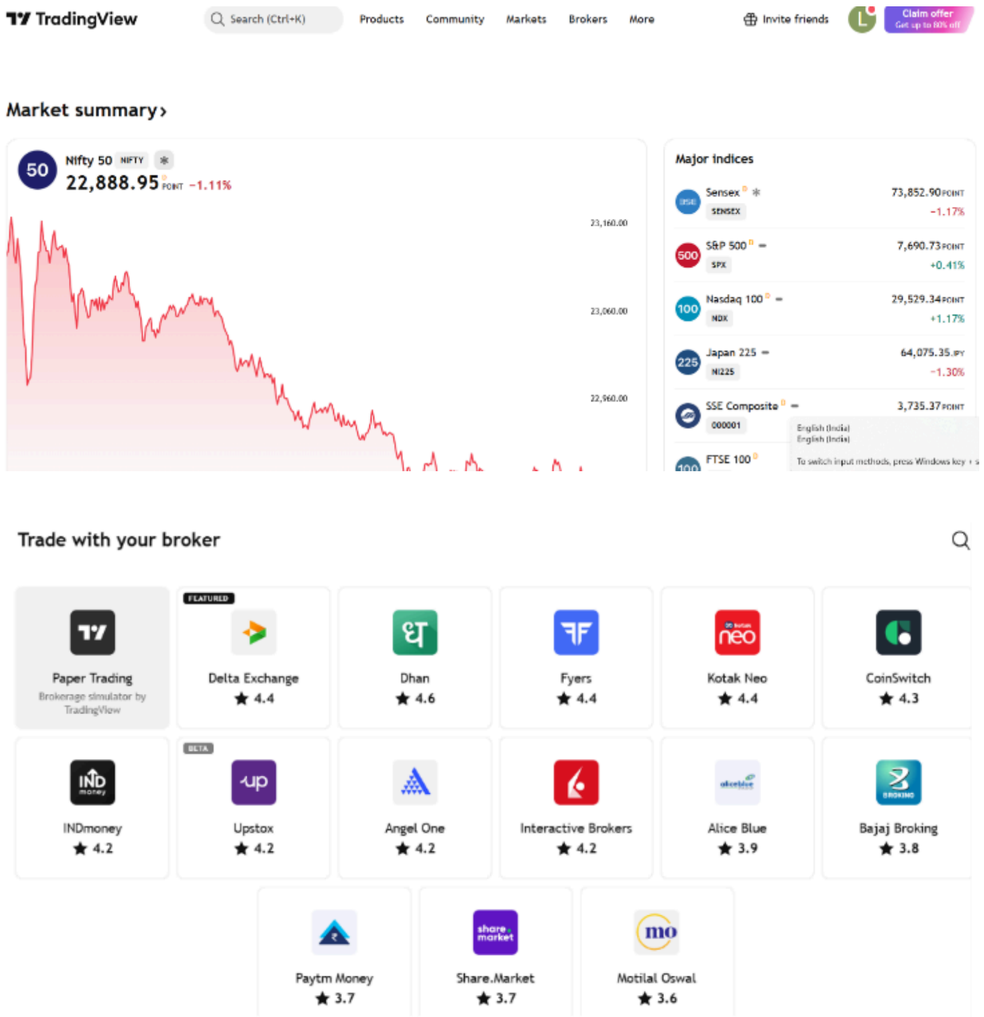

**Purpose:** Build discipline, test decision-making, learn from mistakes at no cost.

**Nature:** Virtual Rs.1,00,000; close to real trading, minus financial risk and emotional pressure.

**Strategy:** Trend-Based (Support & Resistance), risk managed with exit conditions.

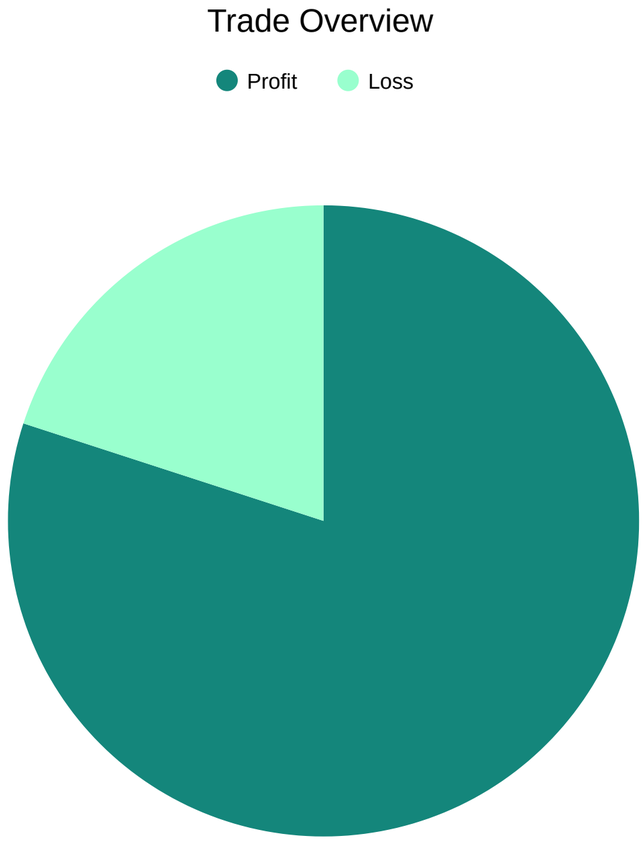

**Final evaluation:** Assess consistency and discipline; identify strengths and weaknesses.

# 2. Portfolio Snapshot

| Portfolio Measure | Final Result |
|---|---|
| Total Trades | 30 |
| Closed / Open | 15 / 15 |
| Profitable Trades | 12 |
| Losing Trades | 3 |
| Realised P&L | -1,607.71 |
| Unrealised P&L | 0.00 |
| Net P&L | -1,607.71 |
| Primary Strategy | Trend-Based |

*Net P&L = Realised P&L + Unrealised P&L*

# Overall Performance & Process

**30**

Total trades

**80%**

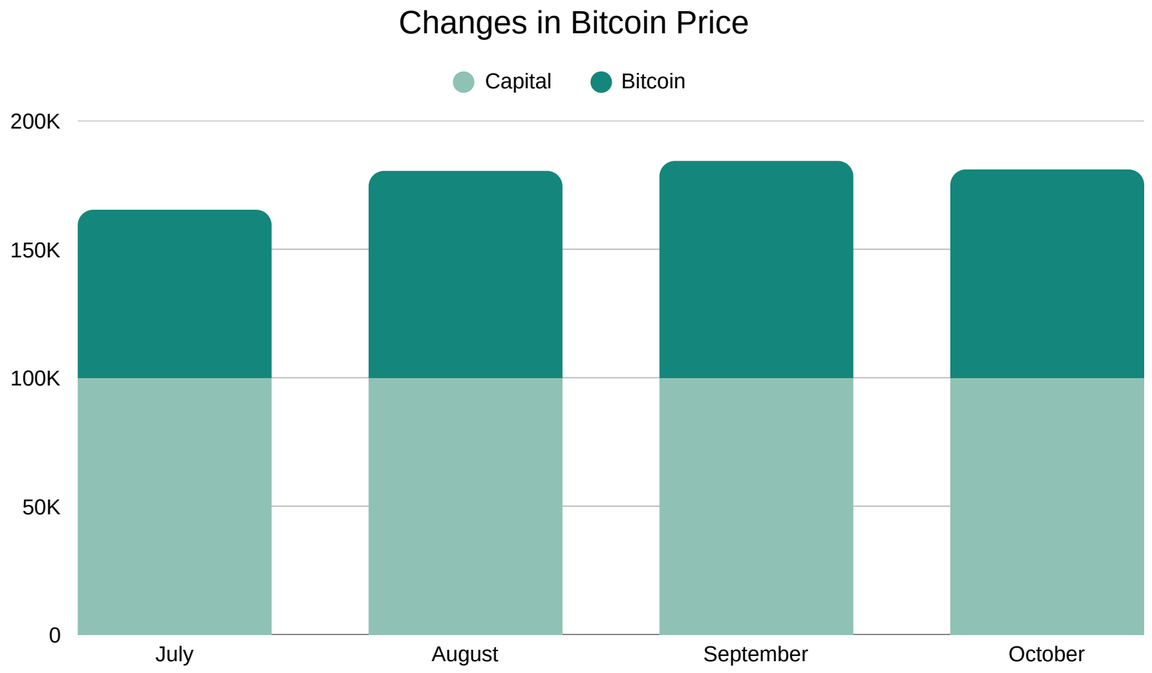

Win rate (12 of 15)

**-1,607.71**

Net P&L

- High win rate, yet net loss: realised P&L -1,607.71, unrealised 0.00.
- Market oscillation: reversals pulled trades back and gave false signals.
- Strategy deviation: early entries, stop-losses not strictly followed.
- Process partly consistent; risk handling improved over time.

# Use of Indicator-Based Strategy

## Relative Strength Index ( RSI )

- RSI 14 Close: Momentum indicator using the last 14 closing prices; ranges from 0–100.
- RSI above 70: Possibly overbought; below 30: possibly oversold; above 50: bullish momentum.

## Simple Moving Average ( SMA )

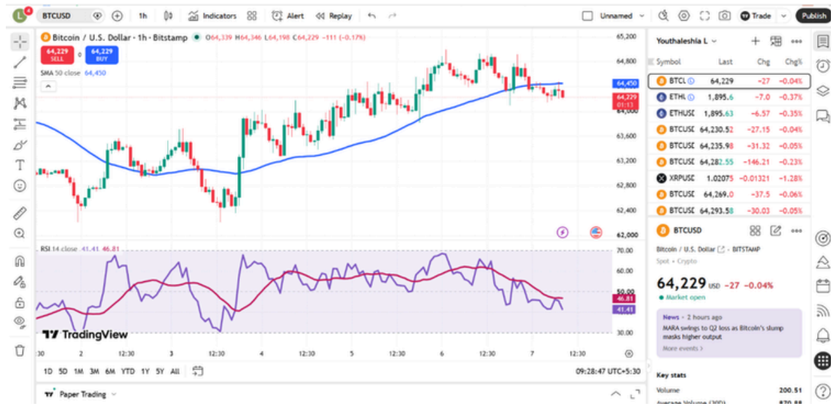

- SMA 50: Average of the last 50 closing prices; shows the medium-term trend and reduces daily price noise.
- Price above SMA 50: Bullish trend; below SMA 50: bearish trend.

# 3. Strategy Overview

Support and Resistance trading in range-bound or oscillating markets: buy near support, sell near resistance. After about four trades, RSI and SMA 50 were added as confirmation. Exits at the opposite level, with stop-losses just beyond the zone.

| Strategy Component | Description |
|---|---|
| Market / Trend | Oscillating Market |
| Entry | Price moves near Support |
| Confirmation | SMA 50: price direction; RSI: momentum |
| Exit | Bearish Signal |
| Stop-loss / Risk | RSI indicates risk in waiting |
| Other | Skip trades when confirmation disagrees |

# Strategy Rationale & Application

Support and Resistance are easy to identify and apply at the beginning of trading. The market reacts to price movements, while indicators help analyse price direction and momentum. Oscillating markets often react at support and resistance lines. This strategy is easy to follow and review, allowing beginners to practise trading without financial risk.

## Required

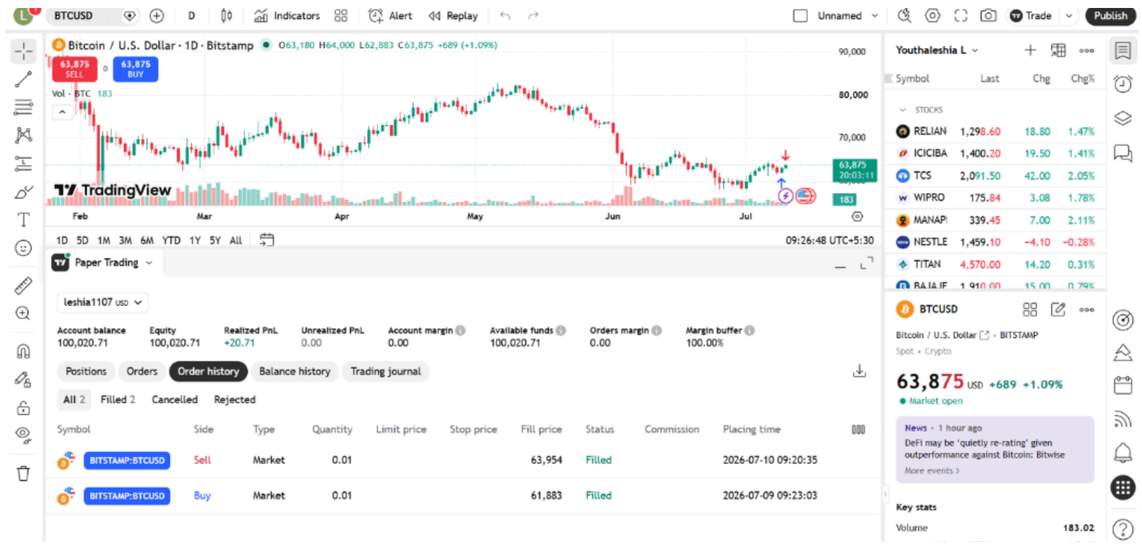

Entries confirmed by SMA 50 and RSI 14 close; exit on bearish signal; RSI to judge risk of waiting.

## Actually made

Added SMA 50 & RSI, improving selection; entries followed well, exits less so, hence net loss despite high win rate.

# Effective Trade

| Effective Trade | Details |
|---|---|
| Asset | Bitcoin (BTCUSD) |
| Date | Jul 9 - Jul 10, 2026 |
| Type / Outcome | Closed / Profit |
| Setup | Price level at Resistance |
| Strategy | Trend Based Strategy |
| Reason | Market supports in gaining process |

**Practice the decision.**
**Not the damage.**

# Strategy Deviation / Improvement Opportunity

| Particulars | Details |
|---|---|
| Asset | Ethereum (ETHUSD) |
| Trade Date | Jul 30 - Aug 10, 2026 |
| Trade Type | Closed |
| Trade Planned | Enter near support and to gain profit. |
| Actually Happened | Price did not reach the target |
| Deviation / Problem | Multiple signals; indicators added to decide |
| Impact | Loss increased; implied risk involvement |
| Option Made | Exit as soon as signal triggered. |

## Takeaway

Entries were consistent; exits and stop-losses were not, as in this ETHUSD trade.

# 4. Consistency & Discipline

## Strategy Consistency

- Followed on most trades.
- Entries more consistent; exits less.
- Repeated deviation in exits and stop-loss.
- Entry quality improved over time.

## Trading Discipline

- Planning improved with SMA 50 & RSI.
- Patience: skipped trades when signals disagreed.
- Entries executed well; exits not always.
- Avoided FOMO; learned from losing trades.

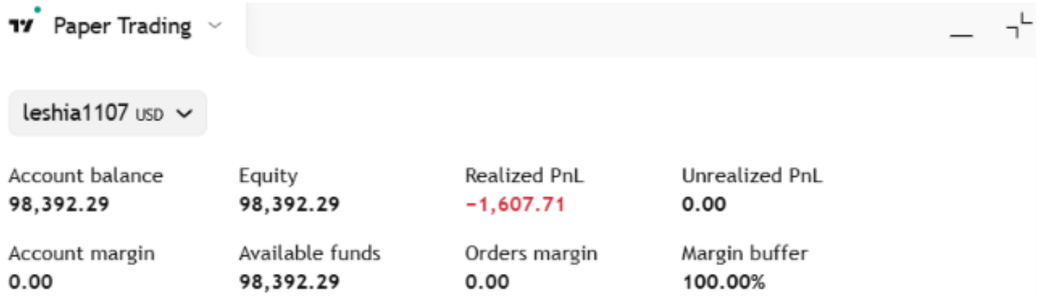

# 5. Strengths & Areas for Improvement

## STRENGTHS

### Market Support
Entered only when price, trend and buyers supported the direction.

### Account Balance
Capital protected; losses small vs profits.

## IMPROVEMENTS

### Early Exits
Closed before the planned exit; profits cut short, several times.

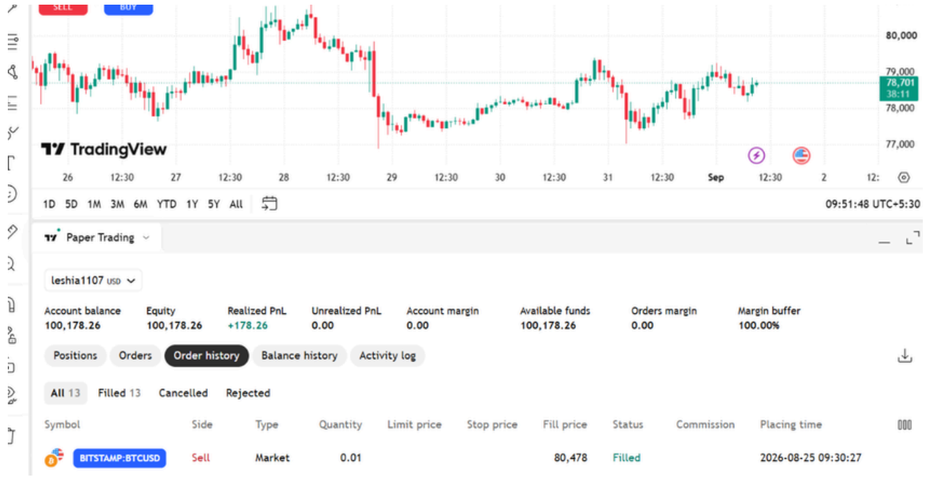

### Emotion Imbalance
FOMO in sudden falls and sideways markets.

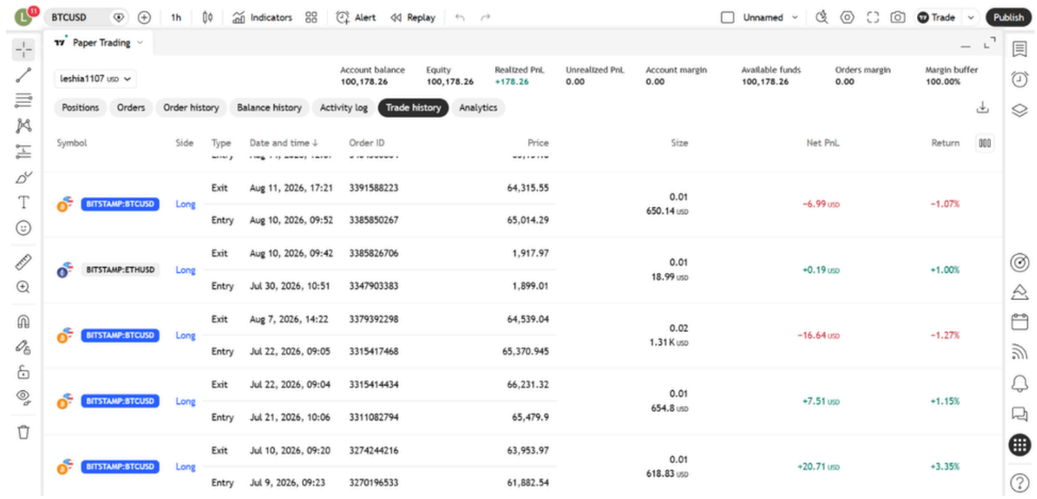

**Improved –** entry quality and planning
**Needs attention –** early exits, strategy switching, patience in sideways markets

# 6. Supporting Portfolio Evidence

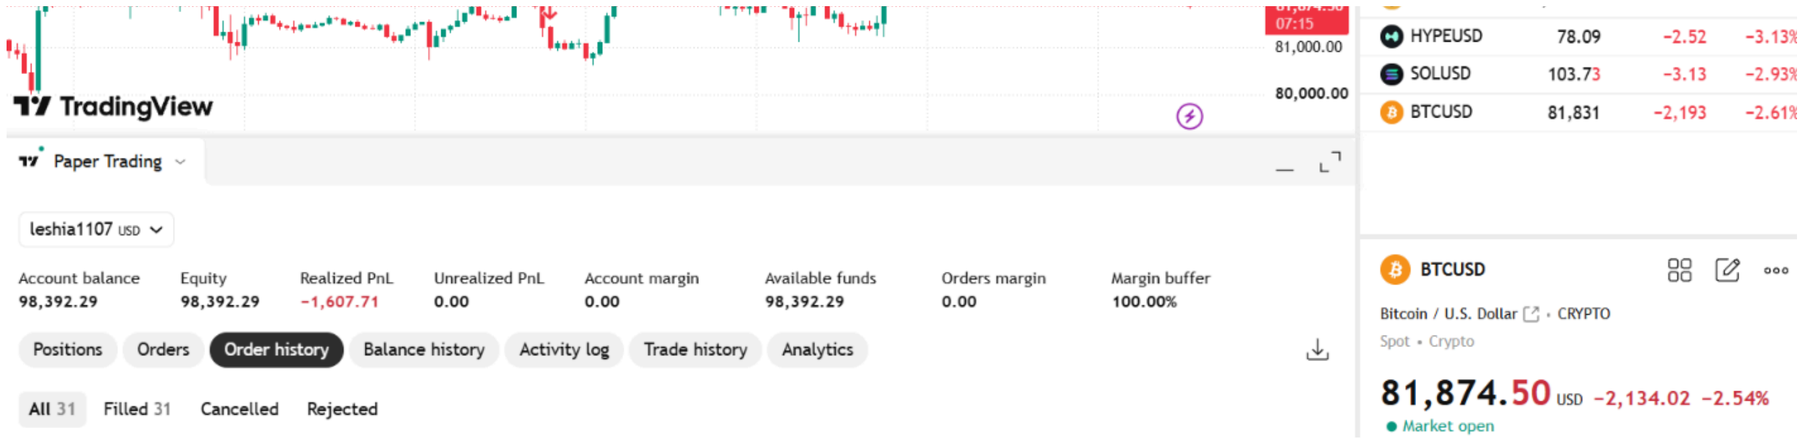

## Account Summary

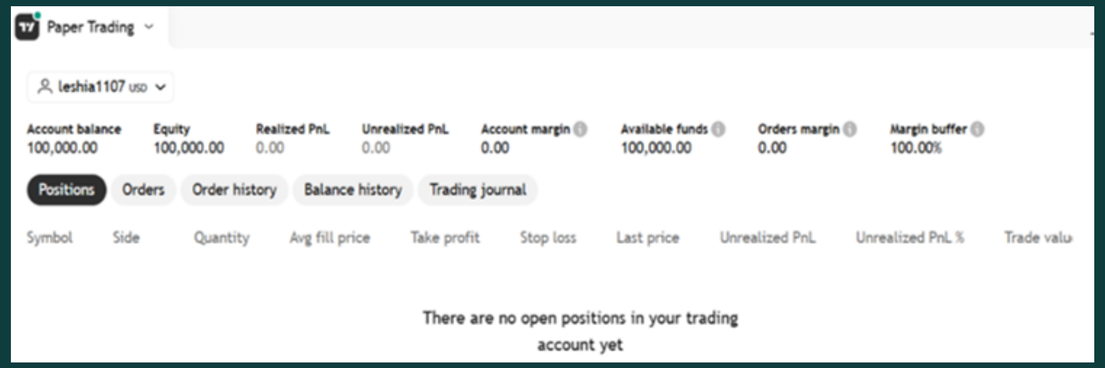

## Trade History

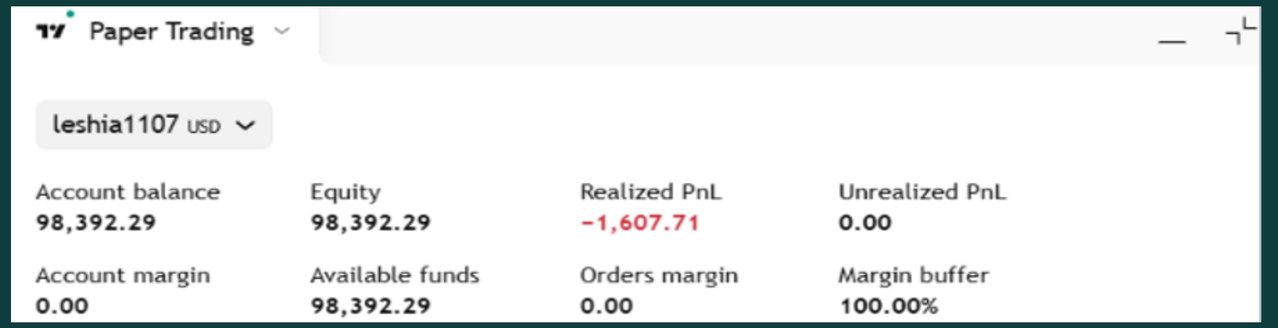

## Position / Order History

## Account History: Then

## Account History: Now

# 7. Conclusion

The combined strategy using Support and Resistance (S&R), SMA 50, and RSI improved entry decisions through confirmation and disciplined execution. The final balance was ₹98,392.29, with a net loss of ₹1,607.71, meaning most of the capital was protected. Although entry accuracy and planning improved, exits and strategy switching remained inconsistent, especially in sideways markets. The key learning is to wait for confirmation, follow the exit plan, and avoid trading in sideways markets to achieve better consistency.
